**My Story**-Kamala Das 2011-03-15 First published in Malayalam in 1973, My Story, Kamala Das' sensational autobiography, shocked readers with its total disregard for mindless conventions and its fearless articulation of a subject still considered taboo. Depicting the author's intensely personal experiences in her passage to womanhood and shedding light on the hypocrisies that informed traditional society, this memoir was far ahead of its time and is now acknowledged as a bona fide masterpiece.

**Philosophy of Education Today**-Philip Higgs 2015 "What is the aim of education in the 21st century? Is it to search for truth, to improve the human condition, or to bolster a country's economy and meet the workforce needs of the state? Or should the aim of education be focused on social, academic, cultural and intellectual development so that young people can grow up to be engaged and critical citizens? These very searching questions - questions about the nature of education - are the concern of a particular area of philosophy: philosophy of education. In Philosophy of Education Today the authors explore the various responses provided by different philosophies of education to these questions, and discuss the ways in which different philosophies influence education and how education is understood. The interactive nature of the text encourages readers to reflect critically on the various philosophies of education discussed and come to an

understanding of what education might mean to them and their community. "--

**Himalayan Blunder**-J. P. Dalvi 2010-01-01 The Indian military setback against the Chinese attack in 1962 was high time for an honest soul-searching. Quite a few books written by Army officers have tried to tell their version of the untold story. Brig. Dalvi's account of the Sino-Indian War is by far the most remarkable and authentic. He was present in the theatre of war throughout, commanded a brigade and was held captive by the Chinese for seven months. In discussing the day-to-day events from 8 September to 20 October 1962 the author graphically tells the truth which only an actual participant could experience and know. The background of the war is drawn from his first-hand information as a high-ranking commander.

**Fundamental Laws of Mechanics**-Igor' Evgen'evich Irodov 1980

**Models, Simulations, and Representations**-Paul Humphreys 2013-03-01 Although scientific models and simulations differ in numerous ways, they are similar in so far as they are posing essentially philosophical problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

**Welding and Metal Fabrication**-Larry Jeffus 2011-01-27 WELDING AND METAL FABRICATION employs a unique hands-on, project-based learning strategy to teach welding skills effectively and keep students highly motivated. This groundbreaking new text connects each welding technique to a useful and creative take-home project, making exercises both practical

To further enhance the learning process, every welding project includes a set of prints with specifications, like those used in production fabrication shops. **Electromagnetic Vibrations, Waves, and Radiation**-George Bekefi 1977 The book describes the features that vibrations and waves of all sorts have in common and includes examples of mechanical, acoustical, and optical manifestations of these phenomena that unite various parts of physics. The main emphasis, however, is on the oscillatory aspects of the electromagnetic field--that is, on the vibrations, waves, radiation, and the interaction of electromagnetic waves with matter. This text was developed over a five-year period during which its authors were teaching the subject. It is the culmination of successful editions of class notes and preliminary texts prepared for their one-semester course at MIT designed for sophomores majoring in physics but taken by students from other

departments as well. The book describes the features that vibrations and waves of all sorts have in common and includes examples of mechanical, acoustical, and optical manifestations of these phenomena that unite various parts of physics. The main emphasis, however, is on the oscillatory aspects of the electromagnetic field--that is, on the vibrations, waves, radiation, and the interaction of electromagnetic waves with matter. The content is designed primarily for the use of second or third year students of physics who have had a semester of mechanics and a semester of electricity and magnetism. The aim throughout is to provide a mathematically unsophisticated treatment of the subject, but one that stresses modern applications of the principles involved. Descriptions of devices that embody such principles--such as seismometers, magnetrons, thermo-nuclear fusion experimental configurations, and lasers--are introduced at appropriate points in the text to illustrate the theoretical concepts. Many illustrations from astrophysics are also included.

**Indulekha**-O. Chandumenon 2005 Perhaps the only novel to have been reprinted nearly every year for over a hundred years, Indulekha (1889) is widely held to be the first Malayalam novel. Often called an 'accidental' and 'flawed' work, at its core lies a love story. The setting of the novel is the Nair community of Kerala, which had for centuries practised polyandrous matriliney, a most unusual form of inheritance through the woman whom both property and authority flavoured. It gives us glimpses of prevalent social practices much debated amongst a people already under colonial pressure to change their ways of life. Written by a Nair, Indulekha is not a grandiose outpouring but the author's effort to achieve certain social goals: firstly, to create a novel much like those of the English authors he had read, and secondly, to illustrate Nair society at that time, both of which met with success. The novel influenced the deliberations of the Malabar Marriage Commission which it predated, and of which Chandumenon was a member.

This novel will appeal to general readers interested in Indian writings in translation. Students of literature, history and culture, political and legal theory, and gender studies, will also find it useful.

**Beginning Logic**-Edward John Lemmon 1978 "One of the most careful and intensive among the introductory texts that can be used with a wide range of students. It builds remarkably sophisticated technical skills, a good sense of the nature of a formal system, and a solid and extensive background for more advanced work in logic. . . . The emphasis throughout is on natural deduction derivations, and the text's deductive systems are its greatest strength. Lemmon's unusual procedure of presenting derivations before truth tables is very effective." --Sarah Stebbins, The Journal of Symbolic Logic

bidder—idol of her childhood dreams, the owner of plantation Belle Chene. A man of blazing passion, Alex du Villier bought the girl out of pity, but her aqua eyes stirred his soul and her body ignited his blood. She would be the perfect mistress to make him forget his coming marriage to a cold, haughty heiress.
