Parent-Child Relations (Azeri Language)-Hisham Altalib 2020-01-01 This easy-to-read, comprehensive guide contains what you need to know on how to parent with confidence. Packed with advice and powerful tips, using the latest research on child development and parenting techniques, it offers a mine of information on how to let children flourish, take the frustration out of parenting and develop happy family relations. Authors provide guidance on developing character, knowledge, values, and skills, as well as a faith-based outlook in children, benefitting parents with kids of all ages. The many strategies and techniques offered include teaching children how to problem-solve, make decisions, and develop self-esteem. Raising God conscious, moral, successful children, with a sense of civic responsibility in today's world is not easy. It is also not impossible. Effective parenting is the key.

Introducing Mathematics-Ziauddin Sardar 2015-03-14 What is mathematics, and why is it

such a mystery to so many people? Mathematics is the greatest creation of human intelligence. It affects us all. We depend on it in our daily lives, and yet many of the tools of mathematics, such as geometry, algebra and trigonometry, are descended from ancient or non-Western civilizations. Introducing Mathematics traces the story of mathematics from the ancient world to modern times, describing the great discoveries and providing an accessible introduction to such topics as number-systems, geometry and algebra, the calculus, the theory of the infinite, statistical reasoning and chaos theory. It shows how the history of mathematics has seen progress and paradox go hand in hand - and how this is still happening today.

Lugha Za Tanzania-Kulikoyela K. Kahigi 2000

What's the Point of School?-Guy Claxton 2013-10-01 Why the education system is failing our kids and how we can start the revolution that will save our schools With their emphasis on regurgitated knowledge and stressful exams, today's schools actually do more harm than good. Guiding readers past the sterile debates about City Academies and dumbed-down exams, Claxton proves that education's key responsibility should be to create enthusiastic learners who will go on to thrive as adults in a swiftly-changing, dynamic world. Students must be encouraged to sharpen their wits, ask questions, and think for themselves - all without chucking out Shakespeare or the Periodic Table. Blending down-to-earth examples with the latest advances in brain science, and written with passion, wit, and authority, this brilliant book will inspire teachers, parents, and readers of all

backgrounds to join a practical revolution and foster in the next generation a natural curiosity and the spirit of adventure.

Better Feedback for Better Teaching-Jeff Archer 2016-04-25 A new and proven paradigm for evaluating teacher effectiveness The Measures of Effective Teaching reflects the work of the Bill & Melinda Gates Foundation's Measures of Effective Teaching (MET) project. The project is dedicated to finding new and more reliable ways to evaluate teacher effectiveness than merely relying on test scores. In the book, Thomas Kane and Steve Cantrell include the key findings on the teaching practices that contribute to student achievement for example starting each class with a clear objective, diagnosing/correcting common student errors. They give school and district administrators a new, more accurate and constructive system for teacher evaluation and feedback. Offers a much-needed resource for accurately measuring how teachers perform in the classroom From the acclaimed Measure of Effective Teaching project of the Bill & Melinda Gate Foundation Thomas Kane is deputy director of education for US Programs at The Bill & Melinda Gates Foundation and Steve Cantrell is a senior program officer for research and evaluation at the foundation Based on research from the MET project, this important resource gives school administrators an effective way to evaluate teachers.

Lexical Semantics-D. A. Cruse 1986-09-18 Lexical Semantics is about the meaning of words. Although obviously a central concern of linguistics, the semantic behaviour of words has been unduly neglected in the current literature, which has tended to emphasize sentential semantics and its relation to formal systems of logic. In this textbook D. A. Cruse establishes in a principled and disciplined way the descriptive and generalizable facts about lexical relations that any formal theory of semantics will have to encompass. Among the topics covered in depth are idiomaticity, lexical ambiguity, synonymy, hierarchical relations such as hyponymy and meronymy, and various types of oppositeness. Syntagmatic relations are also treated in some

detail. The discussions are richly illustrated by examples drawn almost entirely from English. Although a familiarity with traditional grammar is assumed, readers with no technical linguistic background will find the exposition always accessible. All readers with an interest in semantics will find in this original text not only essential background but a stimulating new perspective on the field.

Wanafalsafa Wa Kale Wa Magharibi-Stefano Kaombe 2004 On ancient Western philosophers.

Book-In-Brief: Studies in Islamic Civilization-Ahmed Essa 2012-01-01 Studies in Islamic Civilization draws upon the works of Western scholars to make the case that without the tremendous contribution of the Muslim world there would have been no Renaissance in Europe. For almost a thousand years Islam was arguably one of the leading civilizations of the world spanning a geographic area greater than any other. It eliminated social distinctions between classes and races, made clear that people should enjoy the bounties of the earth provided they did not ignore morals and ethics, and rescued knowledge that would have been lost, if not forever, then at least for centuries. The genius of its scholars triggered the intellectual tradition of Europe and for over seven hundred years its language, Arabic, was the international language of science. Strange then that its legacy lies largely ignored and buried in time. In the words of Aldous Huxley, "Great is truth, but still greater, from a practical point of view, is silence about truth. By simply not mentioning certain subjects... propagandists have influenced opinion much more effectively than they could have by the most eloquent denunciations." Studies in Islamic Civilization is a compelling attempt to redress this wrong and restore the historical truths of a "golden age" that ushered in the Islamic renaissance, and as a by-product that of the West. In doing so it gives a bird's eye view of the achievements of a culture that at its height was considered the model of human progress and development. (2010).

Luo Biological Dictionary-J. O. Kokwaro 1998

This highly illustrated and definitive dictionary, by two renowned biologists - one Kenyan, one Canadian - contains extensive coverage of the flora, fauna and animals of the Lake Victoria region of East Africa occupied by the Luo community, and is based on ten years of research by the authors. It is an expansion of the 1972 publication Luo-English Botanical Dictionary of Plant Names and Their Uses and now provides more botanical entries and an additional section consisting of a zoological dictionary. The individual entry comprises Luo terminology, its botanical/zoological equivalent, common name (when applicable), physical description, its prevalence, and its respective economic use.

Research Methods: The Basics-Nicholas

Walliman 2017-09-12 Research Methods: The Basics is an accessible, user-friendly introduction to the different aspects of research theory, methods and practice. This second edition provides an expanded resource suitable for students and practitioners in a wide range of disciplines including the natural sciences, social sciences and humanities. Structured in two parts - the first covering the nature of knowledge and the reasons for research, the second the specific methods used to carry out effective research and how to propose, plan, carry out and write up a research project - this book covers:

- Reasons for doing a research project
- Structuring and planning a research project
- The ethical issues involved in research
- Different types of data and how they are measured
- Collecting and analysing qualitative and quantitative data in order to draw sound conclusions
- Mixed methods and interdisciplinary research
- Devising a research proposal and writing up the research
- Motivation and quality of work.

Complete with a glossary of key terms and guides to further reading, this book is an essential text for anyone coming to research for the first time.

The Sound Pattern of English-Noam Chomsky

1991 Since this classic work in phonology was published in 1968, there has been no other book that gives as broad a view of the subject, combining generally applicable theoretical contributions with analysis of the details of a single language. The theoretical issues raised in The Sound Pattern of English continue to be critical to current phonology, and in many instances the solutions proposed by Chomsky and Halle have yet to be improved upon. Noam Chomsky and Morris Halle are Institute Professors of Linguistics and Philosophy at MIT.

Kamusi Ya Kiingereza-Kiswahili-Institute of Kiswahili Research 1996 This massive authoritative Swahili dictionary, is the most definitive and comprehensive in existence. It has taken a team of lexicographers and academics fourteen years to prepare, with the support of the Institute of Kiswahili Research in Dar es Salaam. The last comparable edition was in 1939, and was primarily intended to help the user to comprehend English texts. The dictionary records new words and meanings of words which the language has acquired since 1939; and provides lexicographical information needed by current dictionary users. There are more than 50,000 entries, with an attempt to give every English word an equivalent in Swahili, or otherwise a phrase; and the vocabulary covers both general and specialized language. Guidance is provided on use and connotation, word formation and syntax, and derivatives and compounds of a headword are explicitly shown in each entry. The full information and arrangement given for each entry is: headword, homographs, wordclass, alternative spelling of a headword, cross-reference, gloss, definition, subject label, usage label, regional label, senses separated by numbers, illustrative examples, compounds, derivatives, and adjectival complementation.

Successful English-D. Botha 2001-07-31 New Successful English 5 is a story-based language and reading programme developed especially to meet the requirements of the new outcomes-based curriculum. Grade 5 components include Learner's Book, Reading Book, and a Teacher's Book.

Reading the Muslim Mind-Dr. Hassan Hathout 1995-01 Once in a while a book comes along that can reshape the thinking of the world. One

person at a time. "Reading the Muslim Mind" is just such a book. Dr Hassan Hathout starts out from a simple observation - a lifetime of biculturalism leads him to note that "Islam in the West is widely known for what it is not." This encyclopedic personality sets out to guide the reader on a comprehensive tour through Islam. For this voyage, he supplies a keen and lucid anatomy of Islamic life. But more: he provides, with incisive clarity, the inner guidebook; he uncovers the tracing of the mind at work behind the practice, the spirit behind the letter, the rationale and the Ultimate Reason, God.

Essays on the Anatomy of Expression in Painting-Sir Charles Bell 1806 First edition of Bell's (1774-1842) important study of the anatomy and physiology of facial expression. The expressions, attitudes, and movements of the human body had always interested scientists as well as artists, but never before had they been treated with such depth and conciseness. The work reflects Bell's brilliance as both artist and anatomist, and inspired Darwin's own *Expression of the Emotions* (1872), which he described Bell as one of the founders of the subject as a branch of science. Reynolds, 404, Wellcome, II, p.135, B & L Rootenberg, 1987

A History of Pi-Petr Beckmann 1971 Documents the calculation, numerical value, and use of the ratio from 2000 B.C. to the modern computer age, detailing social conditions in eras when progress was made

Perspectives on Classifier Constructions in Sign Languages-Karen Emmorey 2003-04-02 Classifier constructions are universal to sign languages and exhibit unique properties that arise from the nature of the visual-gestural modality. The major goals are to bring to light critical issues related to the study of classifier constructions and to present state-of-the-art linguistic and psycholinguistic analyses of these constructions. It is hoped that by doing so, more researchers will be inspired to investigate the nature of classifier constructions across signed languages and further explore the unique aspects of these forms. The papers in this volume discuss the following issues: *how sign language classifiers differ from spoken languages; *cross-linguistic variation in sign language classifier systems; *the role of gesture; *the nature of

morpho-syntactic and phonological constraints on classifier constructions; *the grammaticization process for these forms; and *the acquisition of classifier forms. Divided into four parts, groups of papers focus on a particular set of issues, and commentary papers end each section.

Handbook of Incidence Geometry-Francis Buekenhout 1995 Hardbound. This Handbook deals with the foundations of incidence geometry, in relationship with division rings, rings, algebras, lattices, groups, topology, graphs, logic and its autonomous development from various viewpoints. Projective and affine geometry are covered in various ways. Major classes of rank 2 geometries such as generalized polygons and partial geometries are surveyed extensively. More than half of the book is devoted to buildings at various levels of generality, including a detailed and original introduction to the subject, a broad study of characterizations in terms of points and lines, applications to algebraic groups, extensions to topological geometry, a survey of results on diagram geometries and nearby generalizations such as matroids.

Islamic Science and Engineering-D. R. Hill 1993 Muslim scientists and engineers contributed enormously to the technology of medieval Europe, both by preserving earlier traditions and by adding their own inventions and innovations. This introduction to the physical sciences and engineering of the Islamic world is the first to trace the full extent of that achievement in the period 750-1500. Using drawings and photographs, as well as iconographic and archaeological evidence to enhance material from Arabic sources, it gives careful explanations of the underlying principles of scientific formulae, machines and constructions, examining the historical background of Islamic technology and its subsequent effect upon European science and engineering. Covering mathematics, astronomy, physics and chemistry, as well as bridge and dam construction, irrigation systems, surveying and mining techniques, this is an ideal introduction to a subject which has received little attention in the past.

The Number π -Pierre Eymard 2004 This is

a clever, beautiful book. The authors trace the thread of π through the long history of mathematics. In so doing, they touch upon many major subjects in mathematics: geometry (of course), number theory, Galois theory, probability, transcendental numbers, analysis, and, as their crown jewel, the theory of elliptic functions, which connects many of the other subjects. By this device, the authors provide a tour through mathematics, one that mathematicians of all levels, amateur or professional, may appreciate. In many cases, the tour stops at beloved topics from particular special interest groups. Remarkably, π is often found at the places of deepest beauty. Anyone from undergraduate mathematics majors through university professors will find many things to enjoy in this book.

Pi - Unleashed-Jörg Arndt 2012-12-06 In the 4,000-year history of research into Pi, results have never been as prolific as present. This book describes, in easy-to-understand language, the latest and most fascinating findings of mathematicians and computer scientists in the field of Pi. Attention is focused on new methods of high-speed computation.

Rings, Fields and Groups-R. B. J. T. Allenby 1991 Provides an introduction to the results, methods and ideas which are now commonly studied in abstract algebra courses

Pi and the AGM-Jonathan M. Borwein 1998-07-13 Critical Acclaim for Pi and the AGM: "Fortunately we have the Borwein's beautiful book . . . explores in the first five chapters the glorious world so dear to Ramanujan . . . would be a marvelous text book for a graduate course."-Bulletin of the American Mathematical Society "What am I to say about this quilt of a book? One is reminded of Debussy who, on being asked by his harmony teacher to explain what rules he was following as he improvised at the piano, replied, "Mon plaisir." The authors are cultured mathematicians. They have selected what has amused and intrigued them in the hope that it will do the same for us. Frankly, I cannot think of a more provocative and generous recipe for writing a book . . . (it) is cleanly, even beautifully written, and attractively printed and composed. The book is unique. I cannot think of any other book in print which contains more than a

smidgen of the material these authors have included.--SIAM Review "If this subject begins to sound more interesting than it did in the last newspaper article on 130 million digits of Pi, I have partly succeeded. To succeed completely I will have gotten you interested enough to read the delightful and important book by the Borweins."--American Mathematical Monthly "The authors are to be commended for their careful presentation of much of the content of Ramanujan's famous paper, 'Modular Equations and Approximations to Pi'. This material has not heretofore appeared in book form. However, more importantly, Ramanujan provided no proofs for many of the claims that he made, and so the authors provided many of the missing details . . . The Borweins, indeed have helped us find the right roads."--Mathematics of Computation

The Guide's Guide to Guiding-Garth Thompson 2007-01-22 Aimed at informing and educating on wildlife guiding in Africa's many diverse parks and safari areas, this resource provides aspiring navigators with complete information on the necessary qualifications and requirements to gain access to this growing field. A wide range of subjects are expertly explored, including guiding principles and camp etiquette, medical supplies and safety tips, and details on the use of common field tools such as rifles, handguns, cameras, and binoculars. Real-life stories blend with artful cartoons--that add humor while emphasizing pertinent points--to round out this must-have reference for those looking for a career in guiding.

Linguistics of American Sign Language-Clayton Valli 2011 Completely reorganized to reflect the growing intricacy of the study of ASL linguistics, the 5th edition presents 26 units in seven parts, including new sections on Black ASL and new sign demonstrations in the DVD.

The Crest of the Peacock-George Gheverghese Joseph 1991

Introduction to Government and Binding Theory-Liliane Haegeman 1994-06-08 Since its first publication in 1991 Liliane Haegeman's Introduction to Government and Binding Theory has become established as the most authoritative introduction to the Principles and Parameters

approach to syntactic theory. This new edition has been extensively updated throughout. Major structural changes include new chapters on Functional Heads and Head Movement and on Relativized Minimality. Discussions of a number of topics missing from or not paid due attention in the first edition have been integrated or expanded, for example: the structure of small clauses (in chapter 2), chain formation (in chapter 6), and reconstruction, multiple movement, wh-absorption, Full Interpretation, and expletive replacement (in chapter 9). The copious exercises have been revised to increase potential for creativity and flexibility of approach. New exercises highlight further controversial issues. In short, this book offers a complete, updated introduction to the current state of Government and Binding Theory, suitable for readers with some basic knowledge of generative linguistics.

A History of Libraries in the Western World-
Elmer D. Johnson 1965

I, Maya Plisetskaya-Maya Plisetskaya
2008-10-01 divdivMaya Plisetskaya, one of the world's foremost dancers, rose to become a prima ballerina of Moscow's Bolshoi Ballet after an early life filled with tragedy and loss. In this spirited memoir, Plisetskaya reflects on her personal and professional odyssey, presenting a unique view of the life of a Soviet artist during the troubled period from the late 1930s to the 1990s. Plisetskaya recounts the execution of her father in the Great Terror and her mother's exile to the Gulag. She describes her admission to the Bolshoi in 1943, the roles she performed there, and the endless petty harassments she endured, from both envious colleagues and Party officials. Refused permission for six years to tour with the company, Plisetskaya eventually performed all over the world, working with such noted choreographers as Roland Petit and Maurice Béjart. She recounts the tumultuous events she lived through and the fascinating people she met—among them the legendary ballet teacher Agrippina Vaganova, George Balanchine, Frank Sinatra, Rudolf Nureyev, and Dmitri Shostakovich. And she provides fascinating details about testy cocktail-party encounters with Khrushchev, tours abroad when her meager per diem allowance brought her close to starvation, and KGB plots to capitalize on her friendship with Robert Kennedy. Gifted, courageous, and

brutally honest, Plisetskaya brilliantly illuminates the world of Soviet ballet during an era that encompasses both repression and cultural détente. Still prima ballerina assoluta with the Bolshoi Ballet, Maya Plisetskaya also travels around the world performing and lecturing. At the Bolshoi's gala celebrating her 75th birthday, President Vladimir Putin presented her with Russia's highest civilian honor, the medal for service to the Russian state, second degree. Tim Scholl is professor of Russian language and literature at Oberlin College. Antonina W. Bouis is the prize-winning translator of more than fifty books, including fiction, nonfiction, and memoirs by such figures as Andrei Sakharov, Elena Bonner, and Dmitri Shostakovich. /DIV/DIV

Corpus Linguistics - An Introduction to the Field and Its Use in Linguistics-Theresa Rass
2013-08 Seminar paper from the year 2010 in the subject English Language and Literature Studies - Linguistics, grade: 2, University of Innsbruck (Anglistik), course: Synchronic and/or Diachronic English Linguistics: English Syntax and Morphology, language: English, abstract: This paper is dealing with the topic of corpus linguistics. It tries to give an overview about this topic, as I think that, although it already gained popularity, not everyone is familiar with it. First, I want to explain what a corpus actually is, and what it is useful for. The different types of corpora will be described and also potential risks of depending too much on computer-processable corpora. Then the focus shifts to the fields of application of corpus linguistics, and also the use in syntax and morphology is discussed. I will also try to illustrate the opportunities a corpus provides by using an example for better understanding. The main aim of this paper is to give an overview about corpus linguistics and the fields of application, with attention to syntax and morphology.

Optics-Vasco Ronchi 1991-01-01 Unorthodox view of optics by world-renowned scientist covers 17th-century optics, optical systems, acuity of vision, optical image, elements of wave motion, much more. Translated by Edward Rosen. 106 black-and-white illustrations.

Selected Proceedings of the 35th Annual Conference on African Linguistics-John M.

Mugane 2006 This volume contains 26 papers selected from the 35th Annual Conference on African Linguistics (ACAL 35), which was held at Harvard University in 2004. The theme of the conference, "African Languages and Linguistics in Broad Perspective," was an open invitation to go beyond traditional linguistic theorizing and to

discuss issues of greater sociolinguistic and cultural meaning, outside of Africa as well as on the continent. The selected papers of this volume represent a broad range of papers selected for their significance, breadth of coverage, and depth of analysis, written by scholars from around the globe.
