The Heart in Systemic Autoimmune Diseases-Andrea Dorea 2004-01-20 This first volume represents the state-of-the-art in the field of cardiovascular disease and autoimmune rheumatic diseases. Systemic autoimmune diseases comprise a family of conditions that share common pathogenetic mechanisms as well as a multi-organ involvement including the heart. This volume has been subdivided into three parts. In the first part, the immune mechanisms involved in cardiac damage have been considered. The role of proinflammatory and regulatory cytokines in driving an autoimmune response to cardiac self-tissues has been analysed. Moreover, the prevalence, the clinical

meaning and the hypothetical pathogenicity of a broad spectrum of organ and non-organ specific autoantibodies have been discussed in detail. In the second part of the volume, the role of humoral and innate immunity in promoting the development of atherosclerotic plaque has been extensively reviewed, along with the newly discovered anti-inflammatory properties of statins. These two parts of the volume deal with exciting aspects of this topic, suggesting a very close connection between heart diseases and immunology. Finally, in the third part, the cardiac manifestations observed in the major systemic autoimmune conditions have been comprehensively examined. This book yields an impressive body of well ordered information, highlighting key references and summarising the experience of a selected panel of distinguished physician-scientists actively involved in the field of cardiovascular disease and systemic autoimmunity.

Surgery: A Case Based Clinical Review provides the reader with a comprehensive understanding of surgical diseases in one easy to use reference that combines multiple teaching formats. The book begins using a case based approach. The cases presented cover the diseases most commonly encountered on a surgical rotation. The cases are designed to provide the reader with the classic findings on history and physical examination. The case presentation is followed by a series of short questions and answers, designed to provide further understanding of the important aspects of the history, physical examination, differential diagnosis, diagnostic

work-up and management, as well as questions that may arise on surgical rounds. Key figures and tables visually reinforce the important elements of the disease process. A brief algorithmic flow chart is provided so the reader can quickly understand the optimal management approach. Two additional special sections further strengthen the student's comprehension. The first section covers areas of controversy in the diagnosis or management of each disease, and another section discusses pitfalls to avoid, where the inexperienced clinician might get in trouble. The text concludes with a series of multiple choice questions in a surgery shelf/USMLE format with robust explanations. Surgery: A Case Based Clinical Review is based on 20 years of Socratic medical student teaching by a nine-time Golden Apple teaching awardee from the UCLA School of Medicine and will be of great utility for medical students when they rotate on surgery, interns, physician assistant students, nursing students and nurse practitioner students.

Introduction to Clinical Examination-Michael J. Ford 2005-01-01 The most important core skills for medical students to master are history taking and clinical examination. This extensively revised, eighth edition has been written with the

philosophy that the acquisition of clinical skills is most effectively undertaken at the bedside. This pocketbook should be used as a companion, to be taken onto the wards and into consulting rooms where the information is most needed. The book begins with a system of history taking followed by a new chapter on the analysis of key symptoms. The remaining chapters cover physical examination of each of the major systems. Each stage of the examination starts with a detailed, step-by-step description of the examination method complemented by relevant illustrations, diagrams and tables on the facing page. This book is intended primarily for use at the outset of clinical training; once students have achieved proficiency in the basic skills of interviewing and examining, the book should also prove useful for revision. An invaluable starter book concentrating purely on the fundamentals of performing a patient examination. Covers each body system and outlines the principles of: - taking a history - how to conduct a physical examination - specific examination points as appropriate Concentrates only on the main

symptoms of disease and then the normal and abnormal physical findings. Mention of specific diseases is confined to those most commonly encountered. Compact and pocket-sized to be carried around easily. · Now in full colour double-page format · Clear simple colour line drawings covering the essentials of a clinical examination. · Published simultaneously with the Eleventh Edition of Macleod's Clinical Examination

Dr. M. Laura Nasi presents a new way of looking at how we view and treat cancer. With current advances in medicine, we're learning more about the ways different aspects of our lives and health impact and interact with one another—why does one long-term smoker get diagnosed with stage-4 lung cancer while another remains cancer-free? Why does someone exposed to a known carcinogen get sick while someone else is apparently immune? What seemingly unrelated factors end up playing key roles in disease etiology, progression, and prognosis? In this well-researched, inspiring, and easy-to-read guide, Dr.

Nasi offers an integrative, whole-person approach to cancer, and explains how it is a systemic disease manifesting a global condition locally. Conventional medicine focuses on attacking malignant cells. Integrative medicine encourages chemo and radiation when necessary, while also focusing on a patient's internal balance to help halt the disease. Nasi draws on the latest research on the PNIE (psycho-neuro-immuno-endocrine) network to help our systems recognize, repair, or eliminate the cancer cells, focusing on nutrition, stress management, exercise, adequate sleep, healthy relationships, and other body/mind/spirit modalities. Dr. Nasi encourages patients to become empowered agents of their own care.
