**A Breath of Fresh Eyre**-Margarete Rubik 2007-01 Ever since its publication in 1847 Jane Eyre - one of the most popular English novels of all time - has fascinated scholars and a wide reading public alike and has proved a source of inspiration to successive generations of creative writers and artists. There is hardly any other hypotext that has been re-worked in so many adaptations for stage and screen, has inspired so many painters and musicians, and has been so often imitated, re-written, parodied or extended by prequels and sequels. New versions in turn refer to and revise older rewritings or take up suggestions from Brontë scholarship, creating a dense intertextual web. The essays collected in this volume do justice to the variety of media

involved in the Jane Eyre reworkings, by covering narrative, visual and stage adaptations, including an adaptor's perspective. Contributions review a diverse range of works, from postcolonial revision to postmodern fantasy, from imaginary after-lives to science fiction, from plays and Hollywood movies to opera, from lithographs and illustrated editions to comics and graphic novels. The volume thus offers a comprehensive collection of reworkings that also takes into account recent novels, plays and works of art that were published after Patsy Stoneman's seminal 1996 study on Brontë Transformations.

**Scaredy Cat**-Mark Billingham 2009-05-26 It is almost unthinkable that a single maniac would murder two women miles apart on the same day. Yet someone followed Carol Garner home from the train station and strangled her to death in front of her three-year-old son. And, afterwards, Ruth Murray died in a similar manner. The evidence is leading Detective Inspector Tom Thorne to a stunning conclusion: there isn't only

one serial killer on the prowl, but a pair of them, working in tandem. And any corpse that turns up in the future just might be accompanied by a second. To stop them both, Thorne must catch a man whose need to manipulate is as great as his need to kill; a man who will threaten those closest to Thorne himself; a man who will show him that the ability to inspire terror is the deadliest weapon of all.

**Scales of Gold**-Dorothy Dunnett 2010-08-11  
With the bravura storytelling and pungent authenticity of detail she brought to her acclaimed Lymond Chronicles, Dorothy Dunnett, grande dame of the historical novel, presents The House of Niccolò series. The time is the 15th century, when intrepid merchants became the new knighthood of Europe. Among them, none is bolder or more cunning than Nicholas vander Poele of Bruges, the good-natured dyer's apprentice who schemes and swashbuckles his way to the helm of a mercantile empire. The year

1464 finds Nicholas back in Venice. Plagued by enemies bent on dissolving his assets and smearing his character, he sets sail for Africa, legendary location of the Fountain of Youth, home to a descendant of Sheba and Solomon, and the source of gold in such abundance that men prefer to barter in shells. He will learn firsthand the brutality and grandeur of the Dark Continent, from the horror of the slave trade to the austere nobility of Islamic Timbuktu. He will discover, too, the charms of the beautiful Gelis van Borselen--a woman whose passion for Nicholas is rivaled only by her desire to punish him for his role in her sister's death. Erotic and lush with detail, Scales of Gold embraces the complexity of the Renaissance, where mercantile adventure couples with more personal quests behind the silken curtains of the Age of Discovery.

### **Knowledge Generation and Technical**

**Change**-Steven Wolf 2001-09-30 Knowledge generation and transfer mechanisms are being transformed in important and controversial ways. Investment in research and development has increased in response to recognition that scientific productivity is tightly connected to economic dynamism. Patent protection has been expanded in order to stimulate higher levels of private investment. Intellectual property rights

held by public organizations and researchers are now increasingly transferred to private organizations to accelerate the diffusion and enhance the value of knowledge produced by public agencies and universities. Additionally, new institutions such as university offices of technology transfer, venture capital markets, and a variety of consortia in knowledge-intensive industries are being established throughout the United States and in other parts of the world. These changes have led to a repositioning of the state in systems of innovation and an increase in the proprietary character of technical information. The purpose of this book is to review and analyze i) contemporary transitions in agricultural knowledge generation and extension arrangements from an empirical perspective, and ii) emerging and contradictory perspectives as to how knowledge systems can be assessed effectively. The authors aim to provide the reader with a better understanding of the implications of new biotechnologies and new intellectual property rights regimes on public-private relations in science, the extent to which benefits

from scientific knowledge are being appropriated by private sector actors, the diversity and possible outcomes of privatization initiatives in extension, and prospects for public goods production and ecological sustainability given contemporary trends. The book presents contrasting views on the degree of complementarity and substitution between private and public sector investments in research and extension. Recognizing that the labels 'public' and 'private' are incomplete and at times misleading descriptions of the structure and function of coordinating bodies in social systems, the analyses highlight ways in which public and private spaces and modes of functioning combine. In addition to illustrating a broad range of analytic methodologies useful for studying organizational questions in knowledge systems, the authors identify the implications of a range of past and potential institutional innovations.

**Scale Problems in Hydrology**-V.K. Gupta  
2012-12-06 A special workshop on scale problems in hydrology was held at Princeton University, Princeton, New Jersey, during October 31-November 3, 1984. This workshop

was the second in a series on this general topic. The proceedings of the first workshop, held in Caracas, Venezuela, in January 1982, appeared in the Journal of Hydrology (Volume 65:1/3, 1983). This book contains the papers presented at the second workshop. The scale problems in hydrology and other geophysical sciences stem from the recognition that the mathematical relationships describing a physical phenomenon are mostly scale dependent in the sense that different relationships manifest at different space-time scales. The broad scientific problem then is to identify and formulate suitable relationships at the scales of practical interest, test them experimentally and seek consistent analytical connections between these relationships and those known at other scales. For example, the current hydrologic theories of evaporation, infiltration, subsurface water

transport and water sediment transport overland and in channels etc. derive mostly from laboratory experiments and therefore generally apply at "small" space-time scales. A rigorous extrapolation of these theories to large spatial and temporal basin scales, as mandated by practical considerations, appears very difficult. Consequently, analytical formulations of suitable hydrologic theories at basin wide space-time scales and their experimental verification is currently being perceived to be an exciting and challenging area of scientific research in hydrology. In order to successfully meet these challenges in the future, this series of workshops was initiated.
