The Photographer's Mind -Michael Freeman 2012-11-12 The source of any photograph is not the camera or even the scene viewed through the viewfinder-it is the mind of the photographer: this is where an image is created before it is committed to a memory card or film. In The Photographer's Mind, the follow-up to the international best-seller, The Photographer's Eye, photographer and author Michael Freeman unravels the mystery behind the creation of a photograph. The nature of photography demands that the viewer constantly be intrigued and surprised by new imagery and different interpretations, more so than in any other art form. The aim of this book is to answer what makes a photograph great, and to explore the ways that top photographers achieve this goal time and time again. As you delve deeper into this subject, The Photographer's Mind will provide you with invaluable knowledge on avoiding clich�e, the cyclical nature of fashion, style and mannerism, light, and even how to handle the unexpected. Michael Freeman is the author of the global bestseller, The Photographer's Eye. Now published in sixteen languages, The Photographer's Eye continues to speak to photographers everywhere. Reaching 100,000 copies in print in the US alone, and 300,000+ worldwide, it shows how anyone can develop the ability to see and shoot great digital photographs.

Who Should Read This Book Those who have little or no programming experience or who might be picking up Visual Basic as a second language. Bug Alert Description: Changing the startup form's name in a VB WinForms app does not update the "Startup form" #4517 Explanation: In the latest Visual Basic update on GitHub, Microsoft accidentally introduced a significant bug that you should be aware of. In the Visual Basic project properties dialog on one of the tabs (Application), is a drop down box for selecting the "startup object". This can be either a Main method or a System.Windows.Forms instance (or System.Windows.Window for WPF). When you do a rename on a form (say from the code editor in source or from the solution explorer) currently set as the startup form the rename doesn't cascade to the startup object project property cause the project to enter an invalid state where the user must now manually reset this project property from the now nonexistent Form to the new name. This is a huge annoyance. The fix for the bug (until Microsoft addresses) can be found here: http://www.jamesfoxall.com/teach-visual-basic-2015-errata/

Group Dynamics in Occupational Therapy-Marilyn B. Cole 2005 To lead effective groups, occupational therapists must develop the skills of group facilitation, design group experiences using different frames of reference, and adapt group interventions to a broad range of client populations. This revised third edition incorporates the AOTA's Occupational Therapy Practice Framework and provides an updated perspective on the design and use of groups in emerging practice areas. The author explains how group activities can serve the needs of clients with similar physical disabilities and mental health issues by working on shared goals and providing a context of cultural and social support for engagement in occupation. Throughout this work, both theory and application are updated with regard to the AOTA's Occupational Therapy Practice Framework and the WHO's International Classification of Functioning. New chapter topics include client-centered groups, groups as social contexts, and a laboratory experience for students in developing cultural competence. The 7-step format for group leadership has been adapted for use in six different frames of reference: psychodynamic, behavioral and cognitive behavioral, cognitive disabilities, developmental, sensorimotor, and the model of human occupation. This processing method teaches students and therapists how to maximize client participation, facilitate group interaction, reinforce learning, and individualize application of occupational principles.
