Frontier History Along Idaho's Clearwater River-

John Bradbury 2014-11-11

The Clearwater River runs deep through northern Idaho's history. The Nez Perce tribe made its home along the river. Lewis and Clark's journey west took them through the Clearwater. In fact, the Nez Perce made the expedition's voyage from the Clearwater River to the Pacific Ocean possible by teaching them how to make dugout canoes from ponderosa pine logs. Fur traders like John Jacob Astor and William Ashley financed the first American commercial activity on the river, bringing trappers to the area and paving the way for the Oregon Trail. Later came the first gold rush, the Nez Perce war, statehood, homesteaders and the beginning of the logging industry. Join author John Bradbury as he recounts a time when native tribes, explorers, trappers,

preachers, miners and lumberjacks made a life along the Clearwater, establishing the area for future generations.

One Day, All Children...-

Wendy Kopp 2008-08-04 From her dorm room at Princeton University, twenty-one-year-old college senior Wendy Kopp decided to launch a movement to improve public

education in America. In *One Day, All Children...*, she shares the remarkable story of Teach For America, a non-profit organization that sends outstanding college graduates to teach for two years in the most under-resourced urban and rural public schools in America. The astonishing success of the program has proven it possible for children in low-income areas to attain the same level of academic achievement as children in more privileged areas and more privileged schools. *One Day, All Children...* is not just a personal memoir. It's a blueprint for the new civil rights movement--a movement that demands educational access and opportunity for all American children.

Conqueror's Moon-Julian May 2005-03-29 From the author of *The Many-Colored Land* comes the saga of a land beyond the horizon, where the quest for power is eternal, where magic and mystery are feared above all, and one man sought to reign. On a remote island, far in the Boreal Sea, four kingdoms have struggled against one another since time out of mind. Most mysterious is the marshland kingdom of Moss—feared by

the others and ruled by the Sorcerers. Soon, all will be put in peril's way. In recent years, three of the kingdoms have suffered fearsome volcanic eruptions that choke crops, famine among people, and an ailing leader on his deathbed. Only Moss, poverty-stricken and desolate at the best of times, seems untroubled. But Prince Conrig of Cathra, who waits patiently as his father, the king, wastes slowly away, is in league with his lover, the seductive sorceress Princess Ullanoth of Moss. And if their secret alliance succeeds in its goal, the warring kingdoms of High Blenholme will be united once and for all—under the iron hand of one supreme rule.

Stress, Coping, and Relationships in

Adolescence-Inge Seiffge-Krenke 2013-05-13 Unique and comprehensive, this volume integrates the most updated theory and research relating to adolescent coping and its determinants. This book is the result of the author's long interest in, and study of, stress, coping, and relationships in adolescence. It begins with an overview of research conducted during the past three decades and contrasts research trends in adolescent coping in the United States and Europe over time. Grounded on a developmental model for adolescent coping, the conceptual issues and major questions are outlined. Supporting research ties together the types of stressors, the ways of coping with normative and non-normative stressors, and the function that close relationships fulfill in this context. More than 3,000 adolescents from different

countries participated in seven studies that are built programmatically on one another and focus on properties that make events stressful, on coping processes and coping styles, on internal and social resources, and on stress-buffering and adaptation. A variety of assessment procedures for measuring stress and coping are presented, including semi-structured interviews, questionnaires, and content analysis. This multimethod-multivariate approach is characterized by assessing the same construct via different methods, replicating the measures in different studies including cross-cultural samples, using several informants, and combining standardized instruments with very open data gathering. The results offer a rich picture of the nature of stressors requiring adolescent coping and highlight the importance of relationship stressors. Age and gender differences in stress appraisal and coping style are also presented. Mid-adolescence emerges as a turning point in the use of certain coping strategies and

social resources. Strong gender differences in stress appraisal and coping style suggest that females are more at risk for developing psychopathology. The book demonstrates how adolescents make use of assistance provided by social support systems and points to the changing influence of parents and peers. It addresses controversial issues such as benefits and costs of close relationships or the beneficial or maladaptive effects of avoidant coping. Its clear style, innovative ideas, and instruments make it an excellent textbook for both introductory and advanced courses. Without question, it may serve as a guide for future research in this field. This book will be of value to researchers, practitioners, and students in various fields such as child clinical and developmental psychology and psychopathology.

**Thermodynamics:
Fundamentals and
Applications for Chemical
Engineers**-Miguel T.
Fleischer 2017-12-29

Thermodynamics:
Fundamentals and
Applications for Chemical
Engineers explores the
concepts and properties of
thermodynamics and
illustrates how they can be
applied to solve practical
problems. The book
introduces the fundamentals
of thermodynamics for multi-
phase, multi-component
systems, providing a
framework for dealing with
problems in chemical
engineering including mixing,
compressing, and distilling
fluids. The first eight chapters
of Thermodynamics focus on
single-component
thermodynamics, introducing
important concepts that will
be referenced throughout
subsequent chapters. Later
chapters introduce modeling
for multi-component systems.
Topics covered include:
properties as a function of
state variables; first and
second law of
thermodynamics; power
cycles, combustion,
refrigeration cycles, and heat
pumps; equilibrium phase
relationships; correlations and
calculations of vapor-liquid
equilibrium data; elementary
theories of solutions; and the

efficiency of multicomponent separation and reaction processes. The Second Law of Thermodynamics, availability concepts, and process efficiency receive extensive coverage. The clear, well-organized sequence of the chapters helps students successfully learn and retain information. Each of the fifteen chapters includes updated sample problems that underline key principles and problem-solving steps. The book has numerous appendixes for quick reference on everything from conversion factors to Francis constants, and from properties of pure substances to thermodynamics tables and Diagrams. Thermodynamics can be used by chemical, petroleum, and mechanical engineering departments in introductory and intermediate courses on engineering thermodynamics and thermodynamics fundamentals. Born and raised in Chile, Miguel T. Fleischer earned his M.S. and Ph.D. in chemical engineering from the University of Houston where he is an adjunct professor and the undergraduate program

director of the Chemical and Biomolecular Engineering Department. Dr. Fleischer worked at Royal Dutch Shell for more than 26 years in research and development, manufacturing, finance, and management. He began teaching when he was an undergraduate student in Chile where he developed a program sponsored by Universidad Catolica de Chile to prepare high school students for college. He was the co-owner and CEO of Fleischer International Trading, a private enterprise that imported and distributed wines from all over the world for 13 years. He continued teaching while he was a graduate student at the University of Houston. He has received the Outstanding Lecturer award of the Cullen College of Engineering four times, the University's Teaching Excellence Award, the Cullen College of Engineering's Career Teaching Award, and the Cullen College of Engineering's Distinguished Engineering Alumni Award.
